

THE UNIVERSITY OF CHICAGO & THE UNIVERSITY OF CHICAGO HOSPITALS

Re: New Parking Structure

Project Description: Community Outreach Meeting

FAQ Sheet

- 1. How will dust containment be controlled?**
Soil would be dampened to keep dust down during dry weather periods. In addition, fabric will be placed on chain link fencing along the alley to further reduce dust migration toward residences and periodic street cleaning.
- 2. How will the construction area be secured?**
A construction fence with fabric screen will be provided to define the limits of the construction and keep children and the general public away from the construction activities. Signage will also be provided around the site to keep unauthorized personnel out of the area.
- 3. Concerns about utility interruptions.**
Flyers will be used to notify the public in advance of all scheduled utility interruptions.
- 4. Concerns about starting times as it relates to noise.**
City ordinances are in effect for both noise and working hours. Work hours would be 7:00 a.m. to 5:00 p.m. The vast majority of the trades will run 7:00 a.m. to 3:30 p.m.
- 5. Concerns about the height of the new building.**
The new Parking Facility will be no taller than the Student Residence north of the site.
- 6. Construction Impact on traffic.**
During periods of heavy traffic (mass excavation, concrete delivery, etc.), flagmen will be provided to control truck traffic entering and leaving the site.
- 7. Construction impact on parking.**
Contractor Parking: The location of the future residential development across from the site will be used for contractor trailers and some parking. Contractors will normally arrive between 6:00 and 7:00 a.m. when residents are already parked. Contractors will leave the jobsite around 3:30 P.M. before residents normally return from work.
Hospital Employee Parking: The Hospitals will provide alternate parking for employees so that residential parking will not be impacted by employee parking.
